

QGIS Installation

3

© Download QGIS :

● <https://www.qgis.org/en/site/forusers/download.html>

The screenshot shows the QGIS website's download page. At the top, there's a navigation bar with links like 'DISCOVER QGIS', 'FOR USERS', 'GET INVOLVED', and 'DOCUMENTATION'. The main heading is 'Download QGIS for your platform'. Below this, it states that binary packages (installers) are available from this page, mentions the current version is QGIS 3.8.0 'Zanzibar' released on 21.06.2019, and lists supported operating systems: Windows, MacOS X, Linux, and Android. There are three tabs: 'INSTALLATION DOWNLOADS', 'ALL RELEASES' (which is circled in orange), and 'SOURCES'. An orange arrow points from the text 'Previous versions are available here' to the 'ALL RELEASES' tab. Below the tabs, the 'Download for Windows' section is expanded. It lists 'QGIS in OSGeo4W' with two network installer options (64 bit and 32 bit). It then provides instructions on how to choose between 'Desktop Express Install' and 'Advanced Install' for different release types. Under 'Standalone installers from OSGeo4W packages', it lists the 'Latest release (richest on features)' as 'QGIS Standalone Installer Version 3.8 (64 bit)' and 'QGIS Standalone Installer Version 3.8 (32 bit)'. Below that, under 'Long term release repository (most stable)', it lists 'QGIS Standalone Installer Version 3.4 (64 bit)' and 'QGIS Standalone Installer Version 3.4 (32 bit)'. The 'QGIS Standalone Installer Version 3.4 (64 bit)' is circled in red, and a red arrow points to it with the text 'Click here'.

→ A file .exe is created on your computer
